GH-4500

Welcome to the introduction of the GH-4500 massage chair designed and manufactured by G-Health, leader in high quality products for health and well-being. The GH-4500 massage chair uses the most advanced technology in automated massage, reproducing complete professional massotherapist techniques.

The GH-4500 model is not only equipped with the latest technology in 3D and "air cushion" massage; the user has also the opportunity to receive personalized care adapted to its own shape and size.

With its sophisticated European design with high quality PU leather covering (Leather is optional), the GH-4500 massage chair, is truly a combination of comfort and effectiveness dedicated towards a refined clientele that values pleasure and luxury. For Global-Health Group, well-being and health is our policy.

How can
luxury and health
ever be integrated into one
total body system?

 Power Consumption: 20~200 Watts
 Time Range: 5~30 Minutes
 Recline Angle: 115~175 Degrees
 Massage stroke length: 30 Inches
 Dimensions: (Upright) W33,5" x D47,25" x H45,3"
 (Recline) W33,5" x D70,9" x H31,5"
 Net Weight: 175 lbs
 Cover Fabric Materials: Leather / Half Leather and Fire retardant PVC Leather / Fire Retardant PVC Leather
 Components: Japanese Components
 Included: Digital Remote control / Headrest / Massage Softening Pad

Automatic adjustment

This will scan the body and automatically adjust according to the shape of the user's neck, shoulder, back, and waist for the best massage.

Automatic recline

The backrest and footrest are fully adjustable at a touch of the button for maximum comfort and safety.

Footrest height adjustment

The footrest can be moved forward and back to accommodate people of various heights.

Neck massage

Giving you a massage similar to someone's forefinger and thumb massaging between the two sides of your neck.

Vibration therapy

This movement stimulates the dilation of blood vessels, which will facilitate the elimination of impurities and toxins in the blood, while activating cells of weak tissues and organs.

Heat therapy

Similar to warming up before exercise, this function will heat the back area for improved muscle reaction and circulation.

Calf massage

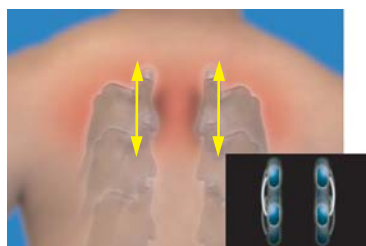

6 air bags are positioned at the calf to effectively massage the ankle and leg. Feels like someone massaging your leg with two hands. Kneading in the calves helps tight calf muscles to loosen.

ADVANCED ROLLER MASSAGE

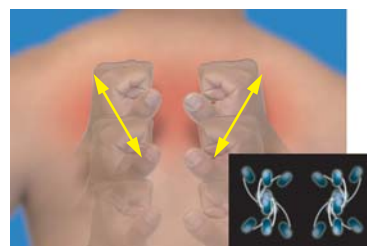

Dual action kneading

Four rollers are used to output strong force that gives the ultimate massage experience, designed to alleviate muscle tension, eliminating fatigue.

Pressurized rolling

When moving up and down, it functions like the fixed-point or revolving finger pressing by professional masseurs for direct and effective massage.

Chop action tapping

This helps to rapidly remove soreness and pains, relaxing stiff muscles and soften thick layers of fatty deposits, stimulating stressed muscles and nerve tissues to achieve total relaxation.

Kneading/Tapping Combo

The new dual-action function features kneading and tapping that provides an even more enjoyable and refreshing experience.
